

**Department of Electrical and Computer Engineering**  
**ECE 777: Detection and Estimation Theory**

**Description:** The course covers various aspects of detection of signals as well as estimating signal parameters from noisy data. Topics include both simple and composite hypothesis testing; optimality criteria in signal detection (Bayes risk, minimum probability of error, and the Neyman-Pearson Lemma); the LRT, the GLRT, and the ROC; detecting deterministic as well as random signals in noise; subspace detectors for detecting signals with unknown parameters; the sufficient statistics, the CFAR detector, the concept of invariance and the UMPI detector; important parameter/spectrum estimation approaches, the CRLB and asymptotic results.

**Prerequisites:** (Co-requisite) ECE 601, ECE 640, ECE 673, and background in Linear Algebra

**Textbook(s)/Materials required:**

- L. L. Scharf, *Statistical Signal Processing: Detection, Estimation, and Time Series Analysis*, Addison Wesley, 1991.
- S. M. Kay, *Fundamentals of Statistical Signal Processing: Estimation Theory* (Vol.-I), *Detection Theory* (Vol.-II), Prentice Hall, 1993, 1998.
- Notes on lecture highlights and pointers to further reading for projects (to be posted in highlander pipeline course file folder).

**Lecture Topics and Schedule:**

<b>Tentative Course Schedule</b>	<b>Week</b>
<b>Introduction &amp; Motivation</b> <ul style="list-style-type: none"> <li>➤ Statistical reasoning and its applications</li> <li>➤ Estimation</li> <li>➤ Detection</li> <li>➤ Time series analysis</li> </ul>	1
<b>Rudiments of Linear Algebra and Matrix Analysis</b> <ul style="list-style-type: none"> <li>➤ Vector spaces and linear independence</li> <li>➤ Cholesky factorization and QR decomposition</li> <li>➤ Matrices of special structures, properties, and asymptotic results</li> <li>➤ SVD, subspaces, projections, rotations, and pseudo-inverses</li> </ul>	2-3
<b>Multivariate Statistics</b> <ul style="list-style-type: none"> <li>➤ Important probability density functions</li> <li>➤ MVN distribution and quadratic forms</li> </ul>	3-4
<b>Detection Theory</b> <ul style="list-style-type: none"> <li>➤ Optimality criteria in signal detection</li> <li>➤ Neyman-Pearson lemma, the LRT, and the ROC</li> <li>➤ Sufficiency and Invariance</li> <li>➤ The CFAR detectors and the Bayes detectors</li> <li>➤ Signal detection examples</li> <li>➤ The GLRT and UMPI detector</li> </ul>	5-7

---

This course outline serves to provide a big picture of the course. Instructional materials such as textbooks, individual topics, and grading policy are subject to revision and changes by individual instructors.

<b>Estimation Theory</b> <ul style="list-style-type: none"> <li>➤ The optimality criteria in parameter/signal/spectrum estimation</li> <li>➤ The MVU and MLE, linear and non-linear models</li> </ul>	8-9
<b>Estimation Theory – Cont’d</b> <ul style="list-style-type: none"> <li>➤ The FIM, the CRLB, nuisance parameters, and asymptotic results</li> <li>➤ The linear statistical model</li> <li>➤ Parameter estimation, system identification, and estimation in structured correlation matrices</li> </ul>	9-11
<b>The Bayes Estimators</b> <ul style="list-style-type: none"> <li>➤ Bayes risk, the prior, the posteriori, and the Bayes rules</li> <li>➤ The linear statistical model</li> <li>➤ The MAP</li> <li>➤ The MMSE estimators and the low-rank approximations</li> </ul>	12-13
<b>Least Squares and the BLUE</b> <ul style="list-style-type: none"> <li>➤ The linear model</li> <li>➤ Subspaces, projections, and approximations</li> <li>➤ The SVD, QR, and the Cholesky factorization in applications</li> <li>➤ The BLUE</li> </ul>	13-14
<b>Final Project Presentation</b>	15

### Grading Policy:

Homework (20%), Mini-Projects (20%),

Mid-term Exam (30%), Final Project & Presentation (30%).

**Honor Code:** The NJIT Honor Code will be upheld, and any violations will be brought to the immediate attention of the Dean of Students.

**Updates and Assignments** are posted in highlander pipeline under ECE777 course file folder.

### Instructor:

Professor Hongya Ge

Room 333 ECEC

Phone: 973-642-4990

Fax: 973-596-5680

Email: [ge@njit.edu](mailto:ge@njit.edu)

### Office hours for the fall semester of 2014:

Wednesdays 4:00pm -- 5:00pm or by appointment

**Prepared by:** H. Ge
